- ✓ Advanced security.
- ✓ Manage and Issue Certificates.

Trading Community Management

Companies often face the challenge of how to best integrate their trading partner community. The challenge is to find an efficient, centralized, and automated solution that is cost effective and flexible.

Beyond connecting a select group of trading partners, your company must connect hundreds, if not thousands, of trading partners to extend its efficiency, visibility, and control across its entire value chain.

Trading communities can be diverse, with partners of varying size, each trading at a different level of importance or a different level of technical sophistication.

TD Community Manager

To meet these challenges, bTrade's TD Community Manager solution has the flexibility to support a wide range of connectivity methods, and retain the agility to integrate new partners and technologies to meet future needs. TD Community Manager allows you to assume the role of a trading partner hub administrator, and gives you an easy and cost-effective way for managing your entire trading partner network.

"For over fifteen years, bTrade has provided FedEx with a stable, reliable, and secure best practice solution for managed file transfer service. We choose bTrade because we cannot tolerate any instability or security risks."

Tom Tompkins, IT Manager
for FedEx

Using TDCommunity Manager you can:

- Record trading partner-specific registration information
- Manage and issue public/private key certificates and symmetric keys
- Specify appropriate security protection through algorithms, structures and modes
- Manage your trading partners and relationships.
- Send and receive files through your trading network
